# M2 Training Problems

Ted Szylowiec tedszy@gmail.com

#### 1 Functions, identity, inverses and plots

**1.** Let f(x) = 2x + 1. Find...

(a) Find f(f(x)).

(b) Find f(f(f(x))).

(c) Find f(f(f(x)))).

2. Let  $f(x) = 3x^2 + 1$  and g(x) = 2x - 3.

(a) Find f(g(x)).

(b) Find g(f(x)).

Are they the same?

3. Let f(x) = ax + b. (a) Find f(f(x)). (b) Find f(f(f(x))).

4. Let f(x) = ax + b and g(x) = cx + d. (a) Find f(g(x)). (b) Find g(f(x)).

Are they the same?

- **5.** Sketch y = x and y = -x. Put them on the same axes. Label everything.
- **6.** Sketch y = 2x and y = -2x. Put them on the same axes.
- 7. Sketch these lines on the same axes.

$$y=\frac{x}{2}, \quad y=-\frac{x}{2}.$$

- **8.** Make an exact plot of y = 3x + 2 by finding the *x*-intercept and *y*-intercept.
- 9. Make an exact plot of

$$y=-\frac{x}{2}-1.$$

10. If f(x) and g(x) are linear, show that
(a) f(g(x)) is linear.
(b) g(f(x)) is linear.

**11.** Let f(x) = 3x + 2. Find  $f^{-1}(x)$ . Do it two ways:

- (a) By  $f(f^{-1}(x)) = I(x)$ . (b) And by  $f^{-1}(f(x)) = I(x)$ .
- **12.** Let f(x) = ax + b. Find  $f^{-1}(x)$ . Do it two ways:
  - (a) By  $f(f^{-1}(x)) = I(x)$ .
  - (b) And by  $f^{-1}(f(x)) = I(x)$ .

**13.** Let f(x) = 2x + 1. Find  $f^{-1}(x)$ . Make exact plots of f and  $f^{-1}$ . Also draw I.

**14.** Let f(x) = -2x + 3. Find  $f^{-1}(x)$ . Make exact plots of f and  $f^{-1}$ . Also draw I.

15. Consider the function

$$f(x) = -\frac{x}{2} + 3.$$

Find  $f^{-1}(x)$ . Make exact plots of f and  $f^{-1}$ . Also draw I.

- **16.** Sketch the curve  $y = x^2$ . Use the unit square idea.
- **17.** Let  $f(x) = x^2$ . Sketch *f*, *I* and  $f^{-1}$  on the same axes.
- **18.** Let  $f(x) = x^2 + 1$ . Sketch f, I and  $f^{-1}$  on the same axes.

**19.** Are there functions that are inverses of themselves? Does there exist any functions with the property  $f(x) = f^{-1}(x)$ ? In other words, *f* is its own inverse.

- (a) Find one such self-inverse function f.
- (b) Try to find more, as many as you can.

# 2 Introducing logarithms

**20.** Draw the fastest-growing function *f* that you can imagine. Draw I(x) and use it to find the inverse  $f^{-1}$ .

**21.** Draw the slowest-growing function f that you can imagine. Draw the identity I(x) and use it to find the inverse  $f^{-1}$ .

**22.** Given *f*, tell me about the inverse  $f^{-1}$ . Does it grow fast, slowly, very fast etc.?

- (a) *f* is a fast-growing function.
- (b) *f* does not grow at all.
- (c) *f* is a slow-growing function.
- (d) *f* is a very slow-growing function.
- (e) *f* is a very fast-growing function.

**23.** Fill in this table about the behavior of  $f(x) = 2^x$  for different values of x.

x	f(x)
x = 0	f = 1
x > 0	
x < 0	
x > 1	
$x \to \infty$	
$x \to -\infty$	

**24.** Plot  $2^x$ ,  $3^x$  and  $5^x$  all on the same axes.

**25.** Consider the function  $f(n) = \left(1 + \frac{1}{n}\right)^n$ . Use a calculator. Fill in this table

x	f(x)
1	2
2	
5	
10	
100	
1000	

Notice how f(n) keeps increasing as n gets bigger. But also notice how f(n) does not increase to infinity, but approaces the magic number *e* from below.

**26.** Now consider the slightly different function  $g(n) = \left(1 + \frac{1}{n}\right)^{n+1}$ . Use a calculator. Fill in this table

x	f(x)
1	2
2	
5	
10	
100	
1000	

Notice how g(n) keeps decreasing as n gets bigger. But also notice how g(n) does not decrease to minus infinity, but approaces the magic number e from above.

**27.** Plot  $2^x$ ,  $e^x$  and  $10^x$  all on the same axes.

**28.** Plot  $f(x) = 2^x$  and the identity line I(x). Use the identity line to draw the inverse  $f^{-1}(x) = \log_2 x$ .

- **29.** Plot  $f(x) = 3^x$ , I(x) and  $f^{-1}(x) = \log_3 x$  all on the same axes.
- **30.** Fill in this table about the behavior of  $g(x) = \log_2 x$  for different values of *x*.

$$\begin{array}{c|cc} x & g(x) \\ \hline x = 1 & g = 0 \\ x > 1 & \\ x < 1 & \\ x = 2 & \\ x \rightarrow \infty & \\ x \rightarrow 0 & \\ \end{array}$$

- **31.** Does  $2^x$  ever touch the *x*-axis? Does  $\log_2 x$  ever touch the *y*-axis?
- 32. Fill in the table.

x	$3^x$ x	$\log_3 x$
1	1	
2	9	
3	27	
4	243	
5	59049	

**33.** Fill in the table.

x	10 <sup>x</sup> x	$\log_{10} x$
1	1	
2	10	
3	1000	
4	100,000	
5	10,000,000	

**34.** Plot  $\log_2 x$ ,  $\log_3 x$  and  $\log_5 x$  all on the same axes. Label all the important points.

**35.** Plot  $\log_2 x$ ,  $\log_e x$  and  $\log_{10} x$  all on the same axes. Label all the important points.

**36.** The formulas relating f,  $f^{-1}$  and I establish the two most important properties of logarithms and exponentials. Use  $f(x) = a^x$  and  $f^{-1}(x) = \log_a x$  and tell me what these formulas imply:

(a)  $f(f^{-1}(x)) = I(x)$ . (b)  $f^{-1}(f(x)) = I(x)$ .

### 3 Properties of $\log_a$

**37.** Figure out  $a^{\log_a a^x}$ .

**38.** Figure out  $\log_a a^{\log_a a^x}$ .

**39.** Begin with the well-known property of exponential functions  $(a^x)^p = a^{xp}$  and prove the following property of logarithms:

$$\log_a u^p = p \log_a u.$$

Notice how log changes powers to multiplications.

**40.** Begin with something we all know:  $a^{x}a^{y} = a^{x+y}$  and prove the following property of logarithms:

$$\log_a uv = \log_a u + \log_a v.$$

Notice how log changes multiplication into addition.

**41.** Using an idea similar to the one in problem **40**, prove that

$$\log_a uvw = \log_a u + \log_a v + \log_a w.$$

42. Use the results of problems 39 and 40 to prove this:

$$\log_a \frac{u}{v} = \log_a u - \log_a v.$$

Notice how log changes division into subtraction.

43. Use 39, 40 and 42 to figure these out.

(a)  $\log_2 8 \times 32 \times 64$ . (b)  $\log_5 25 \times 125 \times 625$ . (c)  $\log_2 2^7 8^5 16^3$ . (d)  $\log_3 \sqrt{27} \sqrt[3]{81}$ . (a)  $\log_2 \sqrt{125}$ 

(e) 
$$\log_5 \frac{1}{\sqrt[3]{625}}$$
.  
(f)  $\log_e \frac{\sqrt{e}}{e^3} \sqrt[3]{e}$ .

**44.** Use plots to explain why 0 < x < 1 when log *x* is negative.

**45.** Use plots to explain why  $\log x$  is positive when x > 1.

**46.** Let x = a/b. Use the formula in **42** to show that  $\log x$  is negative when 0 < x < 1.

**47.** Let x = a/b. Use the formula in **42** to show that  $\log x$  is positive when x > 1.

**48.** Positive or negative? Use log, algebra and plots to explain why. Assume the logarithm base is a > 1 as usual.

(a) 
$$\log_{a} \frac{2}{3}$$
  
(b)  $\log_{a} \frac{5}{2}$   
(c)  $\log_{a} 0.8$   
(d)  $\log_{a} 1.8$   
(e)  $\log_{a} \frac{e}{\pi}$   
(f)  $\log_{a} \frac{\pi}{e}$ 

**49.** Positive or negative? Explain why.  $\pi$ 

(a) 
$$\log \frac{\pi}{\sqrt{10}}$$
  
(b)  $\log \frac{\sqrt{10}}{\pi}$   
(c)  $\log \frac{3e}{2\pi}$   
(d)  $\log \frac{2\pi}{3e}$ 

50. Bigger or smaller than 1? Explain using logarithms, algebra and plots.

(a) 
$$\left(\frac{3}{2}\right)^{2/3}$$
  
(b)  $\left(\frac{2}{3}\right)^{-3/2}$   
(c)  $\left(\frac{\pi}{5}\right)^{\sqrt{5/2}}$   
(d)  $\left(\frac{1}{\sqrt{3}}\right)^{-1/\sqrt{2}}$   
(e)  $(\sqrt{2})^{-\sqrt{2}}$   
(f)  $\left(\frac{1}{\pi}\right)^{1/e}$   
(g)  $(\sqrt{e})^{-\sqrt{\pi}}$ 

**51.** Given the inequality, determine which is bigger: *x* or *y*. Prove it using logarithms.

- (a)  $(0.5)^x > (0.5)^y$ .
- (b)  $(1.5)^x < (1.5)^y$ .
- (c)  $\left(\frac{3}{2}\right)^x > \left(\frac{3}{2}\right)^y$ .

**52.** Which is bigger: x or y?

- (a)  $\left(\frac{2}{3}\right)^x < \left(\frac{2}{3}\right)^y$ .
- (b)  $\left(\frac{e}{\pi}\right)^x > \left(\frac{e}{\pi}\right)^y$ .
- (c)  $\left(\frac{\pi}{e}\right)^{\chi} < \left(\frac{\pi}{e}\right)^{y}$ .

**53.** Which is bigger? Explain using logarithms, plots, algebra etc.

- (a)  $2^{70}$  or  $7^{20}$ ?
- (b)  $5^{30}$  or  $3^{50}$ ?
- (c)  $2^{50}$  or  $5^{20}$ ?

54. Simplify.

- (a)  $\frac{\log_2 81}{\log_2 27}$ (b)  $81^{\log_3 2}$
- (c)  $64^{\log_4 3}$
- (d)  $e^{\log_e(\log_e e^2)}$
- (e)  $\left(\frac{1}{100}\right)^{\log_{10} 2}$

$$\log_a b = \frac{1}{\log_b a}.$$

#### 56. Simplify.

- (a)  $a^{1/\log_b a^2}$
- (b)  $a^{1/\log_{b^2} a}$
- (c)  $a^{1/\log_{b^6} a^3}$
- (d)  $3^{1/\log_5 3}$
- (e)  $3^{1/\log_5 3^2}$
- (f)  $2^{1/\log_{27} 8}$

**57.** Simplify and explain what values of *a* and *b* are possible.

- (a)  $\log(ab) \log|a|$ .
- (b)  $\log(ab) \log|b|$ .
- (c)  $\log(ab) \log|a| \log|b|$ .

58. Prove that

$$\log_{a^2} x = \frac{1}{2} \log_a x.$$

59. Prove that

$$\log_{a^p} x = \frac{1}{p} \log_a x$$

60. Simplify.  $\log_a b^2 + \log_{a^2} b^4 + \dots + \log_{a^n} b^{2n}$ . 61. Simplify.  $(\log_a b)(\log_b c)(\log_c a)$ . 62. Simplify.  $(\log_a b)(\log_b c)(\log_c d)(\log_d a)$ . 63. Simplify.  $(\log_a b)(\log_{b^2} c^2)(\log_{c^3} a^3)$ . 64. Simplify.  $(\log_a b)(\log_{b^2} c^2)(\log_{c^3} d^3)(\log_{d^4} a^4)$ . 65. Simplify.  $(\log_a b^4)(\log_{b^2} c^3)(\log_{c^3} d^2)(\log_{d^4} a)$ . 66. Simplify.  $(\log_8 5)(\log_{125} 4)$ . 67. Simplify.  $(\log_8 5)(\log_{125} 4)$ . 68. Simplify.  $(\log_{\sqrt{a}} \sqrt{x})$ . 69. Simplify.  $(\log_{\sqrt{a}} b)(\log_{\sqrt{b}} a)$ . 70. Simplify.  $(\log_7 2)(\log_3 5)(\log_5 7)(\log_2 3)$ . 71. Simplify.  $(\log_5 3)(\log_4 5)(\log_{125} 8)$ . 72. Simplify  $(\log_5 2)(\log_{27} 125)(\log_2 3)$ . 73. Use  $\sqrt{\log_a b}\sqrt{\log_a b} = \log_a b$  and prove that

$$a^{\sqrt{\log_a b}} = b^{\sqrt{\log_b a}}.$$

For what values of *a* and *b* is this true?

74. Prove the famous change-of-base formula:

$$\log_a x = (\log_a b) \log_b x.$$

# 4 $\log_a$ with 0 < a < 1. What happens?

**75.** Show that  $\log_1 x$  is undefined. (a) Use algebra and log properties. (b) Use plots. Plot  $y = 1^x$ , I(x) and the construct the inverse function  $\log_1 x$ . Then explain why it is undefined.

**76.** Show that  $\log_0 x$  is undefined. (a) Use algebra and basic log properties. (b) Use plots.

**77.** Use algebra fundamental properties of logarithm to prove that  $\log_a x$  is undefined when a < 0.

**78.** Let a > 1. Consider the sequence a,  $a^2$ ,  $a^3$ ,  $a^4$ ... Are these numbers increasing or decreasing?

**79.** Let 0 < a < 1. Consider the sequence *a*,  $a^2$ ,  $a^3$ ,  $a^4$ ... Are these numbers increasing or decreasing?

**80.** Let a > 1. Consider the sequence a,  $a^{-2}$ ,  $a^{-3}$ ,  $a^{-4}$ ... Are these numbers increasing or decreasing?

**81.** Let 0 < a < 1. Consider the sequence a,  $a^{-2}$ ,  $a^{-3}$ ,  $a^{-4}$ ... Are these numbers increasing or decreasing?

- **82.** Plot  $y = a^x$  for a > 1.
- **83.** Plot  $y = a^x$  for 0 < a < 1.

**84.** Plot on the same axes  $y = a^x$ , I(x) and  $\log_a x$  for a > 1. Use reflection across I(x) to get  $\log_a x$ .

**85.** Plot on the same axes  $y = a^x$ , I(x) and  $\log_a x$  for 0 < a < 1. Use reflection across I(x) to get  $\log_a x$ .
