

# Permutations and Groups

Training problems for M2 2018 term 2

Ted Szylowiec  
tedszy@gmail.com

## 1 Permutations

1. What is a permutation? Explain it.
2. Is it a permutation or not? Explain why.  
(a)  $abcd \rightarrow aabc$ .      (b)  $abcd \rightarrow cadb$ .      (c)  $cbda \rightarrow aebdc$ .      (d)  $dcb a \rightarrow bca$ .
3. What is a transposition?
4. What is a regular permutation? Regular permutations are also called *derangements*.
5. What is the identity permutation?
6. Write down all the different permutations of  $uv$ .
7. Write down all the different permutations of  $abc$ .
8. Write down all the different permutations of  $wxyz$ .
9. I have five boxes colored red, green, blue, yellow, and orange. I have five balls colored red, green, blue, yellow and orange. How many different ways can I arrange the balls into the boxes, with one ball in each box?
10. I want to arrange 10 different people in a row. How many ways can I do this?
11. Prove that the number permutations of  $m$  objects is  $m!$ .
12. Prove that the number of permutation machines having  $m$  boxes per row is  $m!$ .
13. How many elements are in...  
(a)  $S_2$ ?      (b)  $S_3$ ?      (c)  $S_4$ ?      (d)  $S_5$ ?      (e)  $S_7$ ?
14. What is the difference between a permutation symbol and a permutation machine?
15. Write the permutation symbol that does the given permutaion.  
(a)  $abc \rightarrow bac$ .      (b)  $bac \rightarrow abc$ .      (c)  $abcd \rightarrow badc$ .      (d)  $badc \rightarrow abcd$ .
16. Draw the permutation machine that does the given permutaion.

28. Multiply permutation machines.

## 2 $S_3$ and $S_4$

29. Fill in this table for the elements of  $S_3$ .

machine	symbol	symbol	machine
		$\begin{pmatrix} 1 & 2 & 3 \\ 2 & 1 & 3 \end{pmatrix}$	
		$\begin{pmatrix} 1 & 2 & 3 \\ 3 & 2 & 1 \end{pmatrix}$	
		$\begin{pmatrix} 1 & 2 & 3 \\ 2 & 3 & 1 \end{pmatrix}$	

30. Write down all the permutation symbols for  $S_3$  and examine the size of the derangements (how many elements are changed). Then fill in this table:

Size of derangement	Number of elements that do it
0	
1	
2	
3	

31. Write down all the permutation symbols for  $S_4$ . Examine them and fill in this table (like you did in problem 30):

Size of derangement	Number of elements that do it
0	
1	
2	
3	
4	

32. Can you find an organized way to write down all the regular permutations (derangements) of  $S_5$ ? It's a big project. There should be 44 of them.

33. Use these standard definitions for  $S_3$  permutation symbols...

$$\begin{aligned}
 e &= \begin{pmatrix} 1 & 2 & 3 \\ 1 & 2 & 3 \end{pmatrix} & t_1 &= \begin{pmatrix} 1 & 2 & 3 \\ 2 & 1 & 3 \end{pmatrix} & t_2 &= \begin{pmatrix} 1 & 2 & 3 \\ 1 & 3 & 2 \end{pmatrix} \\
 t_3 &= \begin{pmatrix} 1 & 2 & 3 \\ 3 & 2 & 1 \end{pmatrix} & s_1 &= \begin{pmatrix} 1 & 2 & 3 \\ 3 & 1 & 2 \end{pmatrix} & s_2 &= \begin{pmatrix} 1 & 2 & 3 \\ 2 & 3 & 1 \end{pmatrix}
 \end{aligned}$$

...to fill in this mini  $S_3$  multiplication table:

	$e$	$s_1$	$s_2$
$e$			
$s_1$			$s_1s_2$
$s_2$			

The entry  $s_1s_2$  tells you how to combine the symbols. Take  $s_1$  from the leftmost column, and then put  $s_2$  from the top row.

**34.** Use the standard  $S_3$  definitions from problem 33 to construct the full  $S_3$  multiplication table:

	$e$	$t_1$	$t_2$	$t_3$	$s_1$	$s_2$
$e$						
$t_1$						$t_1s_2$
$t_2$						
$t_3$						
$s_1$						
$s_2$						

The entry  $t_1s_2$  tells you how to combine the symbol from the leftmost column ( $t_1$ ), with the symbol from the top row ( $s_2$ ).

**35.** Examine the table in problem 34. Notice that no row has two of the same elements. Also notice that no column has two of the same elements. You can use these facts to fill in the table faster. I was able to get 9 free table entries this way, where I did not have to do any multiplication of permutation symbols. Can you do it in such a way as to get more than 9 free ones?

**36.** Define the symbols  $e$  and  $t$  and use them to construct multiplication tables for  $S_2$  and  $S_1$ . How many elements do  $S_2$  and  $S_1$  have?

**37.** Look at the multiplication tables for  $S_1$ ,  $S_2$  and  $S_3$ . What permutation symbols behave like the identity in  $S_1$ ,  $S_2$  and  $S_3$ ?

**38.** What permutation symbols behave like the identity in  $S_5$ ? In  $S_6$ ?

**39.** Is  $S_2$  inside  $S_3$ ? Explain how.

**40.** Is  $S_3$  inside  $S_4$ ? Explain how.

**41.** Consider these elements of  $S_4$ :

$$e = \begin{pmatrix} 1 & 2 & 3 & 4 \\ 1 & 2 & 3 & 4 \end{pmatrix}, \quad a = \begin{pmatrix} 1 & 2 & 3 & 4 \\ 2 & 1 & 4 & 3 \end{pmatrix}, \quad b = \begin{pmatrix} 1 & 2 & 3 & 4 \\ 3 & 4 & 1 & 2 \end{pmatrix}, \quad c = \begin{pmatrix} 1 & 2 & 3 & 4 \\ 4 & 3 & 2 & 1 \end{pmatrix}.$$

Make a multiplication table with  $e, a, b, c$ . Is the table perfect (each row contains each symbol exactly once and each column contains each symbol exactly once)?

42. Consider these elements of  $S_4$ :

$$e = \begin{pmatrix} 1 & 2 & 3 & 4 \\ 1 & 2 & 3 & 4 \end{pmatrix}, \quad p = \begin{pmatrix} 1 & 2 & 3 & 4 \\ 3 & 4 & 1 & 2 \end{pmatrix}, \quad q = \begin{pmatrix} 1 & 2 & 3 & 4 \\ 2 & 3 & 4 & 1 \end{pmatrix}, \quad r = \begin{pmatrix} 1 & 2 & 3 & 4 \\ 4 & 1 & 2 & 3 \end{pmatrix}.$$

Make a multiplication table with  $e, p, q, r$ . Is the table perfect?

### 3 Inverse

43. Use the  $S_3$  multiplication table in problem 34 to find the inverses of  $e, t_1, t_2, t_3, s_1$  and  $s_2$ . Do it two different ways:

- (a) using  $x \cdot x^{-1} = e$ .                      (b) using  $x^{-1} \cdot x = e$ .

44. Find the inverses of  $e, t_1, t_2, t_3, s_1$  and  $s_2$  *without* using the  $S_3$  multiplication table. Do it two different ways:

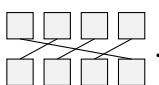

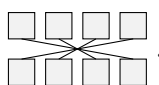

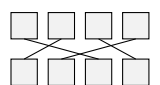

- (a) using  $x \cdot x^{-1} = e$ .                      (b) using  $x^{-1} \cdot x = e$ .

45. Find the inverses of these  $S_4$  permutation symbols.

- (a)  $\begin{pmatrix} 1 & 2 & 3 & 4 \\ 4 & 1 & 2 & 3 \end{pmatrix}$ .                      (b)  $\begin{pmatrix} 1 & 2 & 3 & 4 \\ 4 & 3 & 2 & 1 \end{pmatrix}$ .                      (c)  $\begin{pmatrix} 1 & 2 & 3 & 4 \\ 3 & 1 & 4 & 2 \end{pmatrix}$ .

Do it two different ways: using  $x \cdot x^{-1} = e$  and then using  $x^{-1} \cdot x = e$ .

46. Find the inverses of these  $S_4$  permutation machines.

- (a) .                      (b) .                      (c) .

Do it two different ways: using  $x \cdot x^{-1} = e$  and then using  $x^{-1} \cdot x = e$ . Remember that machines multiply to the right.

47. Find the inverses of these  $S_5$  symbols and machines. Do it two different ways: using  $x \cdot x^{-1} = e$  and  $x^{-1} \cdot x = e$ .

- (a)  $\begin{pmatrix} 1 & 2 & 3 & 4 & 5 \\ 4 & 3 & 2 & 5 & 1 \end{pmatrix}$ .                      (b) .

48. Study the patterns in the  $S_3$  multiplication table of problem 34. Is it possible for an element to have two different inverses? Prove that if  $x$  is an element of  $S_n$  then  $x$  cannot have two different inverses.

49. Prove that the inverse of  $abc$  is  $c^{-1}b^{-1}a^{-1}$ . Hint: use  $xx^{-1} = e$  and  $x^{-1}x = e$ .

### 4 Symmetries

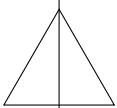

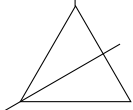

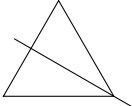

50. What is an isometry?

51. Write down the three different kinds of isometries.

52. What are symmetries?

53. What kind of thing has translational symmetries? Draw some examples.

54. What did the Ancient Greeks think about beauty and symmetry?
55. According to the Ancient Greeks, what is the most beautiful geometric shape? Why did they think so?
56. Find all symmetries of a scalene triangle. Make a multiplication table. (It's not very big.)
57. An isosceles triangle has two symmetries. Find them. Use Roman letters  $a, b, \dots$  for rotational symmetries and Greek letters  $\alpha, \beta, \dots$  for reflection symmetries. Make a multiplication table. Which symmetry behaves like the identity?
58. Find all symmetries of an equilateral triangle. How many are there? Which symmetry behaves like the identity?
59. An equilateral triangle has six symmetries. Three rotational symmetries and three reflection symmetries. We use Roman and Greek letters to give them names:

Symbol	Symmetry
$a$	$0^\circ$ rotation.
$b$	$120^\circ$ rotation.
$c$	$240^\circ$ rotation.
$\alpha$	
$\beta$	
$\gamma$	

Construct a multiplication table for the symmetries of the equilateral triangle:

	$a$	$b$	$c$	$\alpha$	$\beta$	$\gamma$
$a$						
$b$						
$c$						
$\alpha$						
$\beta$						
$\gamma$						

Remember: symmetries are combined from right to left, just like permutation symbols.

60. Compare  $S_1$  to the symmetries of a scalene triangle. Are the multiplication tables similar?

61. Compare  $S_2$  to the symmetries of an isosceles triangle. Are the multiplication tables similar?
62. Compare  $S_3$  to the symmetries of an equilateral triangle. What can you say about the multiplication tables of these two things?

## 5 Groups

63. Write down the symmetries of an isosceles triangle and construct the multiplication table. Prove that they form a group by showing that there is an identity element, that the multiplication table is closed and all symmetries have inverses.
64. Prove that  $S_2$  is a group by showing the three group properties: identity, closure and inverse.
65. Let  $K = \{a, b, c, d\}$  with the following multiplication table:

	$a$	$b$	$c$	$d$
$a$	$a$	$b$	$c$	$d$
$b$	$b$	$a$	$d$	$c$
$c$	$c$	$d$	$a$	$b$
$d$	$d$	$c$	$b$	$a$

Prove that  $K$  is a group.

66. Let  $L = \{x, y, z, w\}$  with the following multiplication table:

	$x$	$y$	$z$	$w$
$x$	$z$	$w$	$x$	$y$
$y$	$w$	$z$	$y$	$x$
$z$	$x$	$y$	$z$	$w$
$w$	$y$	$x$	$w$	$z$

Prove that  $L$  is a group.

67. Let  $G = \{a, b, c, \alpha, \beta, \gamma\}$  be the symmetries of an equilateral triangle, as in 59. Construct the multiplication table for  $G$  and prove that  $G$  is a group. Show identity, closure, inverse.
68. Let  $S_3 = \{e, t_1, t_2, t_3, s_1, s_2\}$  according to the standard definitions that we used in problem 33. Show that  $S_3$  is a group by showing that it has the properties of identity, closure and inverse.
69. Let  $G$  be a group. Prove that the multiplication table for  $G$  has the following magical property: no row has more than one of the same element.
70. Let  $G$  be a group. Prove that the multiplication table for  $G$  has another magical property: no column has more than one of the same element.

71. We saw before that the inverse of  $x$  must satisfy two conditions:  $x^{-1}x = e$  and  $xx^{-1} = e$  where  $e$  is the identity. Let  $y$  in  $yx = e$  be the *left inverse* of  $x$  and let  $z$  in  $xz = e$  be the *right inverse* of  $x$ . Prove that the left inverse must be equal to the right inverse. Hint: it's very easy.

72. Let  $G = \{u, w, x, y, z\}$  and consider the Cayley table:

	$u$	$w$	$x$	$y$	$z$
$u$	$w$	$x$	$u$	$z$	$y$
$w$	$z$	$y$	$w$	$x$	$u$
$x$	$u$	$w$	$x$	$y$	$z$
$y$	$x$	$z$	$y$	$u$	$w$
$z$	$y$	$u$	$z$	$w$	$x$

This table looks good. No element appears twice in any row and no element appears twice in any column. Also,  $G$  has an identity element,  $x$ . But  $G$  is still not a group!

- Look at the left and right inverses of the elements of  $G$ . What do you see?
- Use problem 71 to show that some of the elements of  $G$  must be equal to each other and therefore  $G$  is not a set of 5 distinct elements.

73. Construct a group  $G$  of order 5. Make sure  $G$  has an identity element and make sure to check  $x^{-1}x = xx^{-1} = \text{identity}$  (left and right inverses must be equal.) Find the order each element  $g \in G$  and show that  $g^{|G|}$  for all  $g$  in  $G$ . Find all generators of  $G$ . Is  $G$  cyclic?

74. Let  $G = \{a, b, c, d, e, f\}$  and consider the Cayley table:

	$a$	$b$	$c$	$d$	$e$	$f$
$a$	$a$	$b$	$c$	$d$	$e$	$f$
$b$	$b$	$a$	$e$	$c$	$f$	$d$
$c$	$c$	$d$	$f$	$e$	$b$	$a$
$d$	$d$	$f$	$a$	$b$	$c$	$e$
$e$	$e$	$c$	$d$	$f$	$a$	$b$
$f$	$f$	$e$	$b$	$a$	$d$	$c$

The table looks good. No row has two of the same and no column has two of the same. But  $G$  is still not a group. Show that  $G$  has identity and closure properties, but does not have the inverse property. You can also argue that that some of the elements of  $G$  must be equal to each other, which contradicts the assertion that they are all different. (Credit: Eggyolk from M2/1.)

75. Let  $G = \{a, b, c, d\}$  with the following Cayley table:

	$a$	$b$	$c$	$d$
$a$	$a$	$b$	$c$	$d$
$b$	$b$	$a$	$d$	$c$
$c$	$d$	$c$	$a$	$b$
$d$	$c$	$d$	$b$	$a$

The table looks pretty good: no row has repeated elements and no column has repeated elements. But  $G$  is still not a group. Why not? Hint: when checking the identity property, you have to check both ways:

$$(\text{identity})x = x \quad \text{and} \quad x(\text{identity}) = x.$$

Both must be true for all  $x$  in  $G$ .

76. Let  $G = \{a, b, c, d, e, f\}$  with Cayley table

	$a$	$b$	$c$	$d$	$e$	$f$
$a$	$a$	$b$	$c$	$d$	$e$	$f$
$b$	$b$	$c$	$d$	$e$	$f$	$a$
$c$	$c$	$d$	$e$	$f$	$a$	$b$
$d$	$d$	$e$	$f$	$a$	$b$	$c$
$e$	$e$	$f$	$a$	$b$	$c$	$d$
$f$	$f$	$a$	$b$	$c$	$d$	$e$

Prove that  $G$  is a group.

- What is the identity?
- Check left and right identity properties.
- Check left and right inverses.
- Check closure.
- What are the orders of all the elements?
- Find all generators.
- Is  $G$  cyclic?

77. Construct a group of order 7. Prove that it is a group. When you check the inverse property, make sure to check left inverse and right right inverse. Both must be equal. Find the orders of all the elements. Find all generators. Is the group cyclic?

78. Let  $G$  be a group and let  $g \in G$ . Prove that if  $g^2 = g$  then  $g$  must be the identity element. You can try using contradiction. Assume  $g$  isn't the identity, and try to get a contradiction.

79. Show that  $g^{|S_3|} = e$  for all elements  $g \in S_3$ .

80. Find the order of every element in  $S_3$ .

81. Construct an order-3 group  $G$ . Find the order of each element in  $G$ . Verify that if  $g \in G$  then  $g^{|G|}$  is the identity. Find all generators (if any). Is this group cyclic?

82. Let  $G = \{a, b, c, d\}$  with the following Cayley table:

	$a$	$b$	$c$	$d$
$a$	$a$	$b$	$c$	$d$
$b$	$b$	$d$	$a$	$c$
$c$	$c$	$a$	$d$	$b$
$d$	$d$	$c$	$b$	$a$

Find the order of each element in  $G$ . Verify that  $g^{|\mathcal{G}|}$  is the identity for all  $g$  in  $G$ . Find all generators of  $G$ . Is  $G$  a cyclic group?

83. Find all generators of  $S_3$  (if any). Is  $S_3$  a cyclic group?

84. Is it possible to construct two groups of order 3 that are not isomorphic? In other words, can we construct two different Cayley tables with the same symbols  $a, b, c$  in the same order, which cannot be matched by an isomorphism map?

	$a$	$b$	$c$
$a$			
$b$			
$c$			

	$a$	$b$	$c$
$a$			
$b$			
$c$			

Try it.

85. Construct two order 4 groups  $G = \{a, b, c, d\}$  and  $H = \{w, x, y, z\}$  that are not isomorphic.

	$a$	$b$	$c$	$d$
$a$				
$b$				
$c$				
$d$				

	$w$	$x$	$y$	$z$
$w$				
$x$				
$y$				
$z$				

86. Let  $G = \{a, b, c, d, e\}$ ,  $H = \{v, w, x, y, z\}$  and consider their Cayley tables:

	$a$	$b$	$c$	$d$	$e$
$a$	$a$	$b$	$c$	$d$	$e$
$b$	$b$	$c$	$d$	$e$	$a$
$c$	$c$	$d$	$e$	$a$	$b$
$d$	$d$	$e$	$a$	$b$	$c$
$e$	$e$	$a$	$b$	$c$	$d$

	$v$	$w$	$x$	$y$	$z$
$v$	$y$	$z$	$v$	$w$	$x$
$w$	$z$	$v$	$w$	$x$	$y$
$x$	$v$	$w$	$x$	$y$	$z$
$y$	$w$	$x$	$y$	$z$	$v$
$z$	$x$	$y$	$z$	$v$	$w$

Prove that  $G$  and  $H$  are isomorphic.

- Get clues. Find inverses and orders of all elements.
- Make the isomorphism map
- Arrange the Cayley tables in the same order as your isomorphism map.
- Show that the tables match perfectly.

## 6 Modular arithmetic

87. Who discovered modular arithmetic?

88. Where was Carl Gauss from? Tell me two great things he did in mathematics and one great thing he did in astronomy.

89. Use dot-pictures to draw these numbers:

- (a)  $13 \pmod 2$ .      (b)  $24 \pmod 4$ .      (c)  $19 \pmod 5$ .      (d)  $24 \pmod 7$

90. Draw dot-pictures and figure out if 13 and 34 are congruent  $\pmod 7$ . Explain by looking at the shape of the numbers.

91. Are 28 and 20 congruent  $\pmod 9$ ? Draw dot-pictures. Explain why or why not.

92. For which modulus  $m$  are even numbers congruent to 0 and odd numbers congruent to 1?

93. Draw all the different possible shapes  $\pmod 3$ . Use dot-pictures.

94. Draw all the different possible shapes  $\pmod{10}$ . Use dot-pictures.

95. Draw a circle on the numbers  $\equiv 0 \pmod 2$  and draw a square around the numbers  $\equiv 1 \pmod 2$ .

-30	-29	-28	-27	-26	-25	-24	-23	-22	-21
-20	-19	-18	-17	-16	-15	-14	-13	-12	-11
-10	-9	-8	-7	-6	-5	-4	-3	-2	-1
0	1	2	3	4	5	6	7	8	9
10	11	12	13	14	15	16	17	18	19
20	21	22	23	24	25	26	27	28	29

96. Draw a circle on the numbers congruent to 0  $\pmod 3$ . Draw a square around the ones congruent to 1  $\pmod 3$  and a triangle around the numbers congruent to 2  $\pmod 3$ .

-30	-29	-28	-27	-26	-25	-24	-23	-22	-21
-20	-19	-18	-17	-16	-15	-14	-13	-12	-11
-10	-9	-8	-7	-6	-5	-4	-3	-2	-1
0	1	2	3	4	5	6	7	8	9
10	11	12	13	14	15	16	17	18	19
20	21	22	23	24	25	26	27	28	29

97. Draw a circle on the numbers congruent to 0  $\pmod 4$ . Draw a square around the ones congruent to 1  $\pmod 4$ , a triangle around the numbers congruent to 2  $\pmod 4$  and draw a diamond around the numbers congruent to 3  $\pmod 4$ .

-30	-29	-28	-27	-26	-25	-24	-23	-22	-21
-20	-19	-18	-17	-16	-15	-14	-13	-12	-11
-10	-9	-8	-7	-6	-5	-4	-3	-2	-1
0	1	2	3	4	5	6	7	8	9
10	11	12	13	14	15	16	17	18	19
20	21	22	23	24	25	26	27	28	29

98. Use dot-pictures to prove that odd + odd is even.

99. Use dot-pictures to prove that  $17 + 13 = 0 \pmod 5$ .

100. Divide  $54/16$  by Euclidean division. Find the quotient  $q$  and the remainder  $r$ :

$$54 = q16 + r.$$

101. Divide 641 by 77 using Euclidean division. Find the quotient and remainder.

102. What is the difference between a remainder and a residue?

103. Change to negative residues mod 7:

0 1 2 3 4 5 6 7

104. Change to negative residues mod 10:

0 1 2 3 4 5 6 7 8 9

105. Change to a negative residue.

(a)  $99 \pmod{100}$ .      (b)  $82 \pmod{9}$ .      (c)  $88 \pmod{10}$ .      (d)  $53 \pmod{11}$ .

106. Find negative residues that are congruent to these mod 32.

(a) 49.      (b) 36.      (c) 80.      (d) 65.

107. Find positive residues that are congruent to these mod 20.

(a) 44.      (b) 85.      (c) 53.      (d) 99.

108. Write down a complete set of all the small positive residues mod 12.

109. How many different residues mod  $m$  are there? Write them down.

110. What is the remainder when you divide  $2^{101}$  by 63?

111. What is the remainder when you divide  $2^{65}$  by 65?

112. Figure out  $5^3 + 7^{11} + 2^8 + 3^{11} \pmod{5}$ .

113. Figure out

(a)  $15^{13} + 17^{10} \pmod{16}$ .

(b)  $8^{10} + 12^{10} \pmod{10}$ .

(c)  $(4^{10} + 9^2)(3^{13} + 8^6)(6^3 - 4^7) \pmod{7}$ .

114. Is this even or odd? Use mod 2.

$$(3^{64} + 4^{13})((-2)^{67} - 53^{19})(62^3 - 14^{21}).$$

115. Is this even or odd? Use mod 2.

$$3^{10}(1 + 7^{10}(57^6 + 3^9(1 + 12^6))).$$

116. What is the remainder when you divide  $3^{99}$  by 80?

117. What is the remainder when you divide

$$(7^{10} + 9^{10})(3^{11} + 4^{11})(10^{10} + 5^{10})$$

by 11?

118. Figure these out:

(a)  $6^{10}8^{11} + 5^{10}9^{11} \pmod{5}$ .

- (b)  $7^{10} + 9^{20} + 7^{15}9^{15} \pmod{8}$ .
- (c)  $64 \times 17^3 + 51 \times 64^{10} + 49 \times 8^{16} \pmod{10}$ .
- (d)  $77^6 33^{18} + 65^{16} 48^{12} + 44^6 14^8 \pmod{10}$ .
- (e)  $61^{10} 53^{12} + 47^6 28^9 + 32^5 77^8 \pmod{5}$ .

- 119. What is the remainder when you divide  $2^{10}5^{10} + 2^{11} + 5^{11}$  by 3?
- 120. What is the remainder when you divide  $3^{100}$  by 5? What about dividing  $7^{100}$  by 5? What is the remainder?
- 121. What is the remainder when we divide  $2^{100}$  by 11?
- 122. Find  $3^{50} \pmod{11}$ .
- 123. Find  $5^{99} \pmod{11}$ .
- 124. How would use use  $\pmod$  to find...
  - (a) the last digit of a number  $N$ ?
  - (b) the last two digits of a number  $N$ ?
  - (c) the last three digits of a number  $N$ ?
- 125. What is the last digit of  $9^{100}$ ?
- 126. What is the last digit of  $9^{131}$ ?
- 127. What are the last two digits of  $99^{131}$ ?
- 128. What is the last digit of  $7^{14}$ ?
- 129. What is the last digit of  $2^{21} + 3^{21} + 7^{21}$ ?
- 130. Find  $2^{50}$  and  $5^{50} \pmod{11}$ .
- 131. Find the last digit of  $2^{999}$ . Find the last digit of  $3^{101}$ .
- 132. What are the last two digits of  $2^{999}$ ?
- 133. What are the last two digits of  $13^{999}$ ?
- 134. Find the remainder when you divide  $2^{98}$  by 98.
- 135. Let  $G$  be the set of residues  $\{0, 1, 2, 3, 4\}$  with addition mod 5.

$\begin{matrix} + \\ \text{mod } 5 \end{matrix}$	0	1	2	3	4
0					
1					
2					
3					
4					

- (a) Fill in the Cayley table for  $G$ . Show that the Cayley table is closed. Find the identity element. Check the left and right identity properties:

$$\text{identity} + x = x, \quad x + \text{identity} = x.$$

(b) Find the inverse of every element. Check that left and right inverses are equal:

$$(\text{inverse } x) + x = \text{identity}, \quad x + (\text{inverse } x) = \text{identity}.$$

(c) Find the order of each element in  $G$ . Remember, you care combining elements by addition mod 5.

(d) Find all generators of  $G$  (if any). Is  $G$  cyclic?

We say that  $G$  is the *additive residue group mod 5*.

**136.** Use addition mod 6 with the residues  $G = \{0, 1, 2, 3, 4, 5\}$ . Follow all the same steps as in problem 135 and prove that  $G$  is a group. We call it the *additive residue group mod 6*.

**137.** Use addition mod 7 with residues mod 7. Follow the steps of problem 135. Does this form a group?

**138.** Same as problem 135 but with addition mod 10 and let  $G$  be the set of residues mod 10. Does this form a group? Follow the steps.

**139.** Now let's consider multiplication mod  $m$ . Let  $G$  be the set of residues mod 5,  $G = \{0, 1, 2, 3, 4\}$ , with multiplication mod 5.

$\times$ mod 5	0	1	2	3	4

4					

- Fill in the Cayley table for  $G$ . Is the Cayley table closed?
- Find the identity. Check left and right properties.
- Find the inverses of each element. Check left and right inverses.
- Is  $G$  a group? Explain. Which property is  $G$  missing?

**140.** Maybe we can fix  $G$  from problem 139 by kicking out some elements. Let's kick out 0. So now,  $G = \{1, 2, 3, 4\}$  with multiplication mod 5.

$\times$ mod 5	1	2	3	4
1				
2				
3				
4				

- Fill in the Cayley table for  $G$ . Is the Cayley table closed?
- Find the identity. Check left and right properties.
- Find the inverses of each element. Check left and right inverses.
- Is the new  $G$  a group?

This kind of group is called a *multiplicative residue group* and  $G$  is the *multiplicative residue group mod 5*.

**141.** Try this idea again. Consider the residues mod 7:  $\{0, 1, 2, 3, 4, 5, 6\}$ . Kick out 0. Take  $G = \{1, 2, 3, 4, 5, 6\}$  with multiplication mod 7.

$\times$ mod 7	1	2	3	4	5	6

5						
6						

- (a) Fill in the Cayley table. Is it closed?
- (b) Find the identity. Check left and right properties.
- (c) Find the inverses of each element. Check left and right inverses.
- (d) Is  $G$  a group? What is it called?

**142.** (Critical problems, mod 6, mod 9, mod 10)

**143.** Find these GCDs.

- (a)  $(18, 16)$ .
- (b)  $(18, 6)$ .
- (c)  $(77, 66)$ .
- (d)  $(88, 66)$ .
- (e)  $(72, 48)$ .
- (f)  $(81, 45)$ .

**144.** Find these GCDs.

- (a)  $(17, 13)$ .
- (b)  $(15, 29)$ .
- (c)  $(35, 16)$ .
- (d)  $(1, 1)$ .
- (e)  $(1, 109)$ .
- (f)  $(31, 1)$ .

**145.** Find these GCDs.

- (a)  $(0, 25)$ .
- (b)  $(42, 0)$ .
- (c)  $(1, 0)$ .
- (d)  $(0, 1)$ .
- (e)  $(44, 13)$ .
- (f)  $(43, 120)$ .

**146.** Circle the numbers that are coprime to 10.

2 5 15 17 21 26 30 31 49

**147.** Circle the numbers coprime to 210.

49 99 57 121 143 143 111 169

**148.** Circle the numbers coprime to 12. Put an X on the numbers *not* coprime to 12.

0 1 2 3 4 5 6 7 8 9 10 11

**149.** Circle the numbers coprime to 18. Put an X on the ones that are *not* coprime to 18.

0 1 2 3 4 5 6 7 8 4 10 11 12 13 14 15 16 17

150. Construct a reduced residue set mod 9. How many elements does it have?
151. Construct a reduced residue set mod 24. How many elements does it have?
152. Construct a reduced residue set mod 11. How many elements does it have?
153. Construct a reduced residue set mod  $p$ , where  $p$  is a prime number. How many elements does it have?
154. There are exactly two kinds of groups of order 4: the Klein-4 group and the cyclic-4 group. Let  $K_4 = \{a, b, c, d\}$  be the Klein-4 group and let  $C_4 = \{w, x, y, z\}$  be the cyclic-4 group.  $K_4$  and  $C_4$  have these Cayley tables:

	$a$	$b$	$c$	$d$
$a$	$a$	$b$	$c$	$d$
$b$	$b$	$a$	$d$	$c$
$c$	$c$	$d$	$a$	$b$
$d$	$d$	$c$	$b$	$a$

	$w$	$x$	$y$	$z$
$w$	$w$	$x$	$y$	$z$
$x$	$x$	$y$	$z$	$w$
$y$	$y$	$z$	$w$	$x$
$z$	$z$	$w$	$x$	$y$

All other groups of order 4 are isomorphic to one of these. This fact opens up many interesting questions about modular arithmetic groups.

Let  $G$  be the additive residue group mod 4. What type of group is  $G$ ? Is it isomorphic to  $K_4$  or isomorphic to  $C_4$ ?

155. Let  $G$  be the multiplicative residue group mod 5. Find all generators. Is it cyclic? Use problem 154 and figure out if  $G$  is isomorphic to  $K_4$  or to  $C_4$ .
156. Let  $G$  be the multiplicative residue group mod 8. Find all generators (if any). Find the order of each element. Is  $G$  cyclic? What is  $G$  isomorphic to,  $K_4$  or  $C_4$ ?
157. Let  $G$  be the multiplicative residue group mod 10. Find all generators, if any. Find the order of each element. Is  $G$  cyclic? Is  $G$  isomorphic to  $K_4$  or to  $C_4$ . Prove it by making an isomorphism map, putting the Cayley tables in order, and showing that they match.
158. Let  $G$  be the multiplicative residue group mod 12. Find the order of each element. Find all generators, if any. Is  $G$  cyclic? What is  $G$  isomorphic to, the Klein-4 group or the cyclic-4 group? Prove it by making the isomorphism map, arranging the Cayley tables in order, and showing that they match perfectly.
